Chennai – 600049

SUMMARY

Full-stack developer with 7+ years of hands-on software development experience (12+ years total professional experience including prior research work), currently building citizen-facing e-governance and payment platforms at TNeGA. Skilled across React/Node.js and PHP stacks, with direct experience in payment gateway integration, microservices architecture, AWS cloud deployment, and application security hardening. Comfortable owning a feature end to end, from database schema to production UI, and has led small frontend teams. Also builds internal tooling in Python — a self-hosted CI/CD platform, a static security auditor and a geocoding microservice — to help teams ship faster and safer.

TECHNICAL SKILLS

Languages	JavaScript (ES6+), TypeScript, Python, PHP, SQL
Frontend	React.js, Redux, Zustand, TanStack Query, HTML5, CSS3, Tailwind CSS, Bootstrap, jQuery, Responsive Design
Backend	Node.js, Express.js, Python (FastAPI), PHP Core (MVC), RESTful APIs, Microservices Architecture, Background Job Queues
Databases	PostgreSQL, MongoDB, MySQL, Amazon Aurora, Redis, SQLAlchemy, Alembic
Cloud (AWS)	Amplify, Elastic Beanstalk, Aurora (RDS), Secrets Manager, Security Groups / IAM
Security & Payments	JWT Authentication, OAuth 2.0, RBAC, Argon2, Credential Encryption, Payment Gateway Integration, OWASP-driven Code Auditing
DevOps & Tools	Git/GitHub, CI/CD (GitHub Actions), SSH Deployment Automation, Docker, Postman, Agile/Scrum, Team Leadership

EXPERIENCE

Full Stack Developer

2024 – Present

TNeGA – Tamil Nadu e-Governance Agency

- Develop frontend and backend features for citizen-facing e-governance applications
- Built the core logic for a streamlined digital payment processing workflow
- Adopted a microservices architecture and implemented security enhancements to protect sensitive citizen and transaction data
- Built internal tooling for deployment, security auditing and geocoding (DeployHub, CodeAudit, DIGIPIN Service)

Project Engineer

2023 – 2024

Haoda Payment Solutions

- Led frontend development and a small team of developers
- Spearheaded end-to-end integration of a payment API, designing a streamlined workflow that improved processing efficiency
- Conducted market research and competitive analysis to identify key competitors and emerging technologies

Junior Developer

2019 – 2023

JSM International Tour and Travels

- Developed and maintained web applications for tour and travel booking services
- Collaborated with senior developers to design and implement new features
- Participated in code reviews and team planning meetings

Junior Researcher

2014 – 2018

ITAAC Research Center

- Researched market demand and competitor products to inform strategy
- Collaborated with cross-functional teams to translate findings into feature requirements
- Participated in client requirement-gathering sessions

PROJECTS

DBT – Direct Beneficiary Transfer

TNeGA Project

`Node.js` `Express.js` `React` `PostgreSQL`

```
Payment flow: Initiate payment → Validation checks → Validation summary →
Bank file generation → Transfer to bank
```

- Developed the full-stack platform for transferring scheme funds directly into beneficiaries' bank accounts
- Implemented validation checks on beneficiary data at payment initiation, with a validation summary for review before the bank file is generated
- Built scheme onboarding, configuring each scheme with its corresponding bank details and file paths
- Built a dashboard with metrics for payments initiated, beneficiary validation and bank responses, with pie-chart breakdowns
- Added provision to re-initiate payments, and reports on payments, validation and bank responses
- Implemented secure payment gateway integration and optimized queries for faster transaction processing

SSP – State Scholarship Portal

Department, Institute & Student Modules

`PHP Core (MVC)` `Python` `HTML5/CSS3` `Bootstrap` `jQuery` `DataTables` `ECharts` `AWS Amplify` `Elastic Beanstalk` `Aurora (RDS)` `Secrets Manager`

- Built and maintained the Department, Institute, and Student modules, covering scheme management, fee abstracts, and applicant tracking (EMIS/UMIS)
- Implemented the bus pass application workflow end to end, including approval handling and on-demand PDF generation for issued passes
- Built a Python service to initiate payments and process/update payment gateway responses via cURL-based REST calls, running as a background process with an ack-based polling endpoint for job/payment status
- Implemented data-table driven reports with filtering, PDF/Excel export, and pagination for large scholarship datasets
- Built interactive dashboards with ECharts for scheme-wise scholarship and fee analytics
- Deployed and operated the application on AWS: frontend on Amplify, backend services on Elastic Beanstalk, and the database on Aurora (RDS)
- Configured AWS Security Groups and Secrets Manager to restrict network access and manage credentials securely

MUT – Magalir Urimai Thittam

Government Welfare Scheme

`React` `Node.js` `MongoDB`

- Built mobile and web applications for the women's welfare scheme, including a responsive role-based web portal
- **Mobile app** — data collection and verification of applicant details, with backend services validating and processing the collected data
- **VAO assignment** — assign VAOs (Village Administrative Officers) under the PDS (Public Distribution System)
- **User management** — create users with specific roles for approval and management, with role-based access control (RBAC)
- **Reports & dashboard** — filter-based reports to view and download, and a dashboard of key metrics

CMWSSB – Chennai Metropolitan Water Supply

Water Management System

`React` `Node.js` `PostgreSQL`

- Developed a dashboard for water supply monitoring and management
- Built reporting modules for billing and consumption analysis
- Implemented real-time data visualization with interactive charts

TOOLS BUILT

DeployHub

2026

Self-hosted CI/CD Deployment Platform

`FastAPI` `React 19` `TypeScript` `PostgreSQL` `Redis · arq` `SQLAlchemy` `asyncssh` `TanStack Query` `Zustand`

- Replaces manual "SSH in and git pull" releases with a tracked, auditable, one-click pipeline, without the weight of Jenkins or ArgoCD
- Async worker pipeline: checkout → build → package → SSH deploy → atomic release switch → health check, with automatic rollback on failure
- Builds queued to a separate Redis/arq worker so long builds never block API requests
- JWT auth with rotating refresh tokens, Argon2id hashing, 5-role RBAC and encrypted credential storage
- Deploys to any SSH-reachable server or AWS EC2, with approve/reject/rollback and full deployment history

CodeAudit

2026

Local Code Security & Bug Scanner

`Python (stdlib)` `Static analysis` `OWASP` `paramiko · SFTP` `Vanilla JS`

- Static analysis tool for PHP/JS web apps that runs entirely on-prem (no API keys, no third-party calls), built on the Python standard library with a single optional dependency
- 71 rules across security, forms, uploads, performance and code quality, each mapped to an OWASP category
- Detects SQL/command injection, file inclusion, open redirects, CORS misconfiguration, insecure cookies and secrets in web storage, plus dead-file detection and frontend-to-backend payload field matching
- Scans a local path, an upload, a git clone or a remote server over SFTP; exports reports as PDF, XLSX, HTML, Markdown or JSON (PDF and XLSX hand-built, no libraries)

DIGIPIN Service

2026

Geocoding Microservice

`FastAPI` `Pydantic` `Uvicorn` `REST` `Postman`

- Stateless API that encodes latitude/longitude into India Post's DIGIPIN national addressing grid code and decodes it back, implemented from the Department of Posts technical specification (March 2025)
- Encode/decode endpoints in GET and POST forms, with validation for out-of-bounds coordinates and malformed codes; edge-of-grid behaviour matches the official service
- Response contract and dated logging aligned with existing services so the PHP apps can proxy it directly; shipped with a Postman collection and a deploy bundle

EDUCATION

B.E. Computer Science

2011 – 2013

Bethlahem Institute of Engineering, Karungal, K.K. Dist.

Diploma in Computer Engineering

2008 – 2010

Sri Krishna Polytechnic College, Kalliyancaud, Nagercoil, K.K. Dist.

Secondary School

2007

Shekara Pillai Higher Sec. School, Arumanai, K.K. Dist.

ADDITIONAL

Data Analytics	Currently studying data analysis and visualization to complement reporting and dashboard work.
Open Source	Contributed to open-source projects related to web development, including React components and Node.js utilities.
Mentorship	Mentored junior developers in web technologies and best practices for code organization and project management.
Industry Events	Attended 3 Web Technology Expo events to track emerging tools, frameworks, and industry trends.
AI Implementation	Applied AI-assisted tools within the development workflow to speed up coding, debugging, and documentation.
YouTube Automation	Built automation for YouTube channel workflows, including content publishing and metadata handling.
